

Adithyan K

AI Systems Engineer | LLM Orchestration & Agent Infrastructure
adithyn.krshna@gmail.com | +91 7034046267 | adithyn.dev | [GitHub](https://github.com/adithyn) | [LinkedIn](https://www.linkedin.com/in/adithyan-k)

EDUCATION

Manipal Institute of Technology

B.Tech in Computer Science and Engineering (AI) – **CGPA: 8.36**

Bengaluru, India

Sep. 2022 – Present

EXPERIENCE

AI Engineer Intern

Jan 2026 – Present

SuperAGI – AI native platform for sales, marketing, and support automation

Remote

- Designed and implemented the agent infrastructure and core agent loop for **Vibe Coder** – SuperAGI's AI app builder that generates full applications from natural language descriptions with real-time live preview.
- Built the backend voice pipeline and slide selection flow for **Digital Employees** – AI teammates that autonomously join client meetings, conduct sales demos with voice and avatar, and coordinate slide transitions in real-time.
- Contributing to agent infrastructure and backend systems across multiple AI products on the platform.

Co-Founder & Technical Lead

Jul 2025 – Present

Lifie – Voice and chat AI for businesses

Remote

- Co-founded and lead the technical direction for a voice and chat AI platform with two product lines – REACH (outbound voice engagement) and ASSIST (inbound chat support and sales workflows).
- Designed and implemented a modular LLM orchestration layer with tool routing, retrieval grounding via Qdrant, context management, and guardrail validation for reliable autonomous behavior.
- Built interoperability infrastructure using MCP protocol, enabling cross-platform service discovery and integration.

AI Product Development Intern

June 2025 – July 2025

QpiAI

Bengaluru, India

- Built and shipped a complete sales support agent on QpiAI's Agent Hive platform – automated lead research, enrichment, and personalized outreach generation, replacing a previously manual workflow.
- Integrated LLM APIs and internal SLMs for dynamic lead scoring, enrichment, and content generation across the pipeline.

PROJECTS

cc-vault | Go, Bubble Tea, Lip Gloss

[GitHub](#)

- Built and shipped an open-source terminal tool in Go for managing Claude Code sessions – three-panel lazygit-style interface with full-text search, bulk operations, and markdown-rendered preview.
- Optimized for large session files using partial reads (first 30 lines for metadata, last 8KB for custom titles) – enables instant loading across thousands of sessions without reading full files into memory.

Metafog.io | Next.js, Docker, Nginx, Ollama, LlamaIndex

[Live Link](#)

- Built the full stack for a decentralized AI search engine with a distributed provider network for GPU inference and bandwidth. Owned frontend, backend, Docker orchestration, and Nginx reverse proxy with load balancing across provider nodes.

LLM Fine-tuning – ArXiv Research Q&A | Unsloth, QLoRA, Hugging Face, LangChain, Qdrant, Docker [GitHub](#)

- Fine-tuned Qwen 8B & 14B using QLoRA + Unsloth on a domain-specific research corpus. Built the full pipeline end-to-end: PDF ingestion, chunking, embedding, vector search, and inference.
- Implemented retrieval-grounded inference pipeline using Qdrant + LangChain to reduce out-of-context hallucinations.

SKILLS

Core: AI Systems Engineering, LLM Orchestration, Agent Infrastructure, RAG Pipelines, Backend Architecture

Languages: Python, TypeScript, Go, JavaScript, SQL

AI/ML: LLM Fine-tuning (QLoRA, Unsloth), Context Engineering, MCP, Voice AI Pipelines, Vector Search

Infrastructure: Docker, Docker Compose, Nginx, GCP, GitHub Actions, PostgreSQL, ChromaDB, Qdrant
